Sweet Corn				I	I			H	H			
Tomato	I	I	I	I			H	H	H	H		
Turnip			O	O	SH	SH	SH	H	H			

1. Starting Aubergines & Tomatoes in January can be difficult as the low light levels cause the seedlings to become leggy.
2. Some varieties of broad bean can be sown in October/November to overwinter and get an early start. However in damp cold conditions losses can be high making autumn sowings a bad idea in some areas (particularly northern areas)
3. Also known as Perpetual Spinach
4. Crops the following year, which is why the harvest comes before sowing in the chart.
